New Mail Settings

User Name	SMTP Host	SMTP Port	SSL Trust	Accounts	Action
-----------	-----------	-----------	-----------	----------	--------

4. Fill up:

- SMTP Host and SMTP port number
- Username and password of SMTP Host
- SSL Trust: STARTTLS, SSL/TLS, or NONE

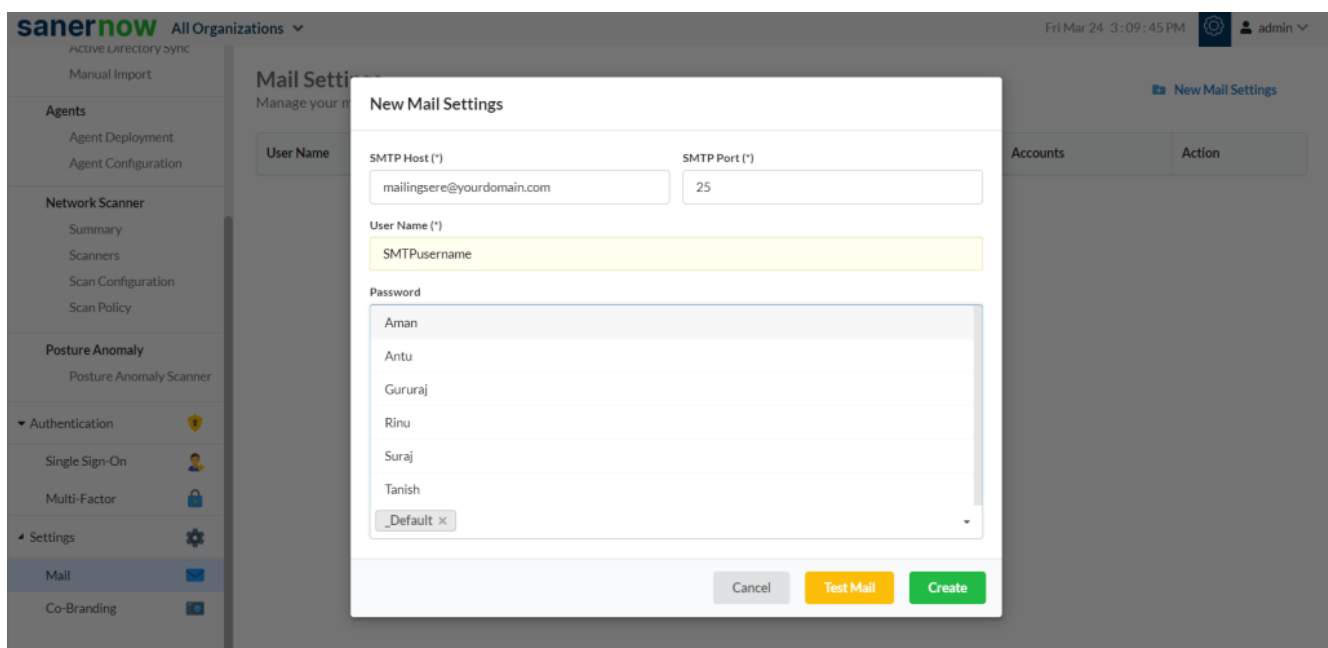

The screenshot shows the 'New Mail Settings' dialog box in the SanerNow interface. The dialog is titled 'New Mail Settings' and has a 'User Name' label. It contains the following fields and options:

- SMTP Host (*)**: A text input field containing 'mailingserver.yourdomain.com'.
- SMTP Port (*)**: A text input field containing '25'.
- User Name (*)**: A text input field containing 'SMTPUsername'.
- Password**: A password input field with masked characters '*****'.
- From**: A text input field containing 'Sender email'.
- SSL Trust**: A dropdown menu with the following options: NONE, STARTTLS, and SSL/TLS. The 'STARTTLS' option is currently selected.

At the bottom of the dialog, there are three buttons: 'Cancel' (grey), 'Test Mail' (orange), and 'Create' (green).

5. Select the accounts to apply the corresponding setting

The screenshot shows the 'New Mail Settings' dialog box in the SanerNow interface, similar to the previous one, but with a different list of accounts in the 'Password' field. The dialog is titled 'New Mail Settings' and has a 'User Name' label. It contains the following fields and options:

- SMTP Host (*)**: A text input field containing 'mailingsere@yourdomain.com'.
- SMTP Port (*)**: A text input field containing '25'.
- User Name (*)**: A text input field containing 'SMTPUsername'.
- Password**: A list of accounts with the following names: Aman, Antu, Gururaj, Rinu, Suraj, and Tanish. There is also a '_Default' option with a close icon.

At the bottom of the dialog, there are three buttons: 'Cancel' (grey), 'Test Mail' (orange), and 'Create' (green).

6. Click on **Create**. You can also send a test mail to verify.

Now you know how to create new mail settings in SanerNow.
