

## How to investigate disks running out of space (<100 MB) in Windows systems?

To investigate the disks that are running out of space in your Windows system, follow the below steps.

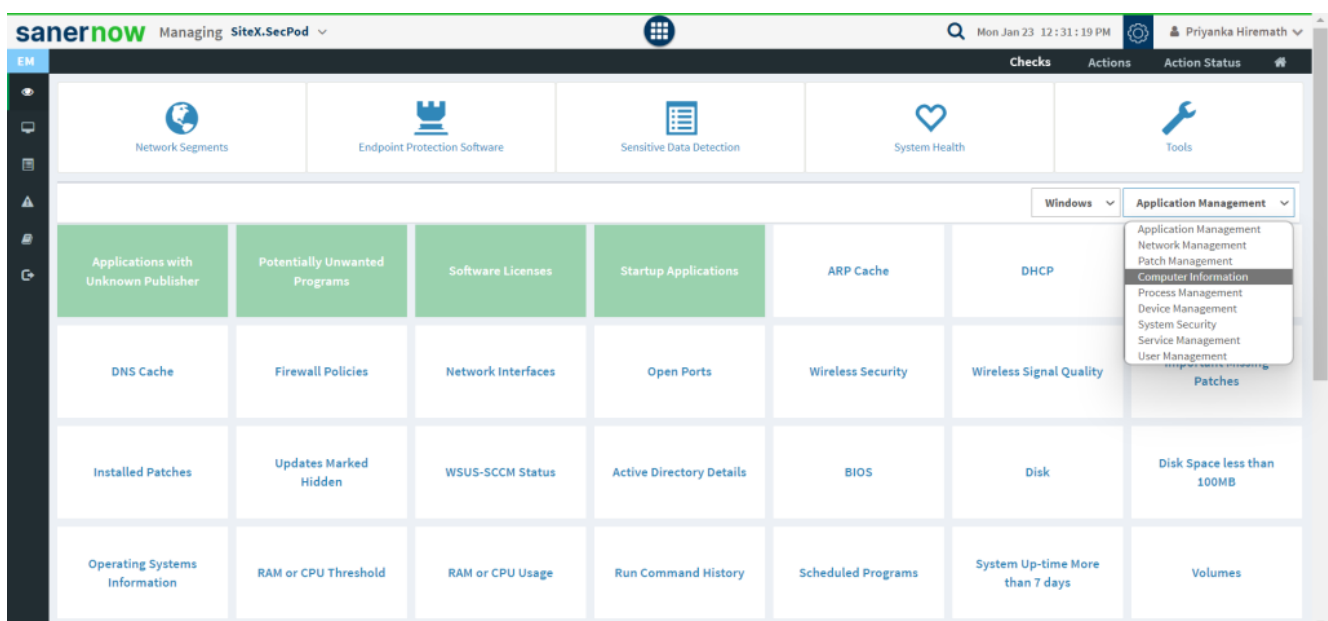

1. In SanerNow, go to **Endpoint Management** module.

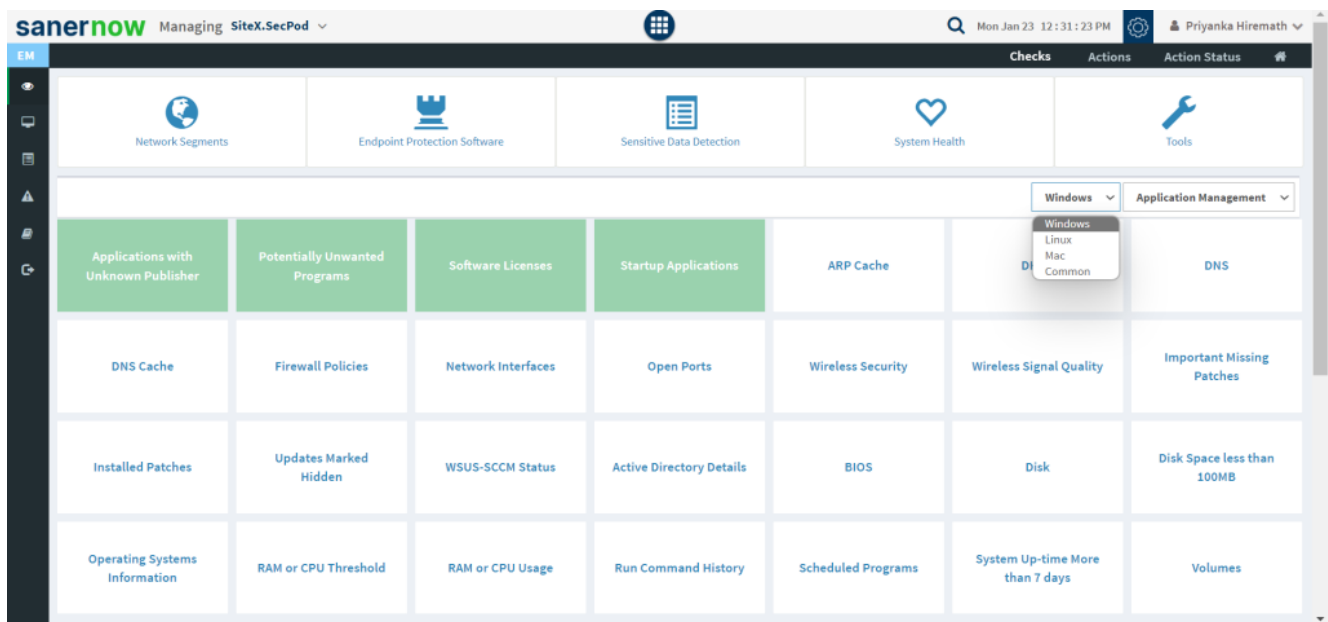

2. In Endpoint Management module, click on **Checks**.

3. It will display you with various checks. On the right-hand side, select **Computer Information** from the dropdown list.

4. Also, select the Operating system: **Windows**.

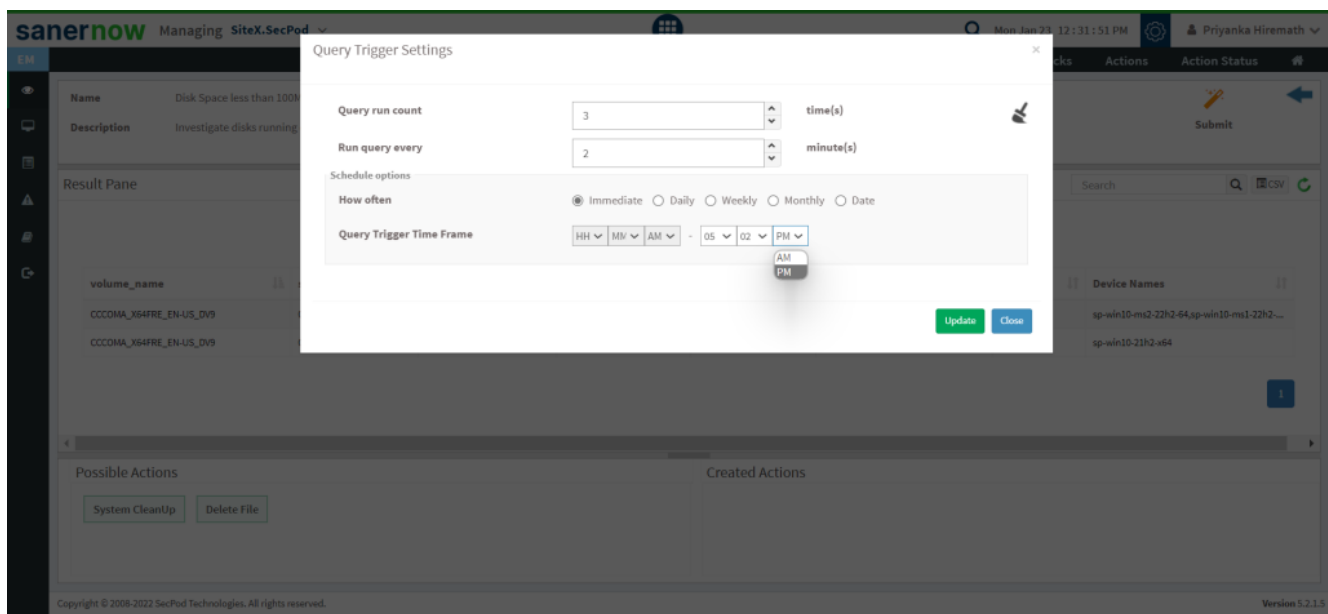

5. The corresponding checks are displayed in green boxes.

6. Now, click on **Disk space less than 100MB** check.

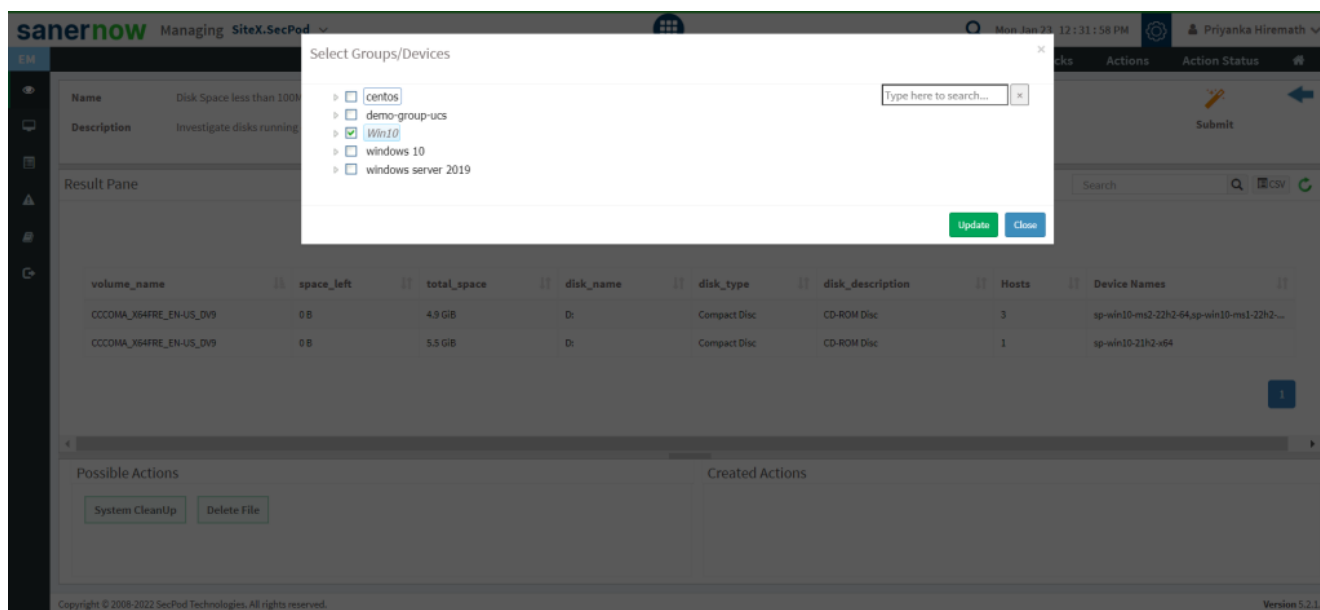

7. To schedule the query execution for the agent, click on **Trigger**. You need to fill up query trigger settings:

- Set the Query run count time in seconds.

- Set the time in minutes to run the query often.
- In Schedule options pane, set the **Query Trigger Time Frame**.
- Click on **Update**.

8. Click on the '**Scope**' to choose the scope of the query.

9. To send the query to agent, click on '**Submit**'.

10. In the **Result Pane**, you can investigate disk information of Windows systems. You can also download the CSV format of the result pane.
