

How to run a compliance scan?

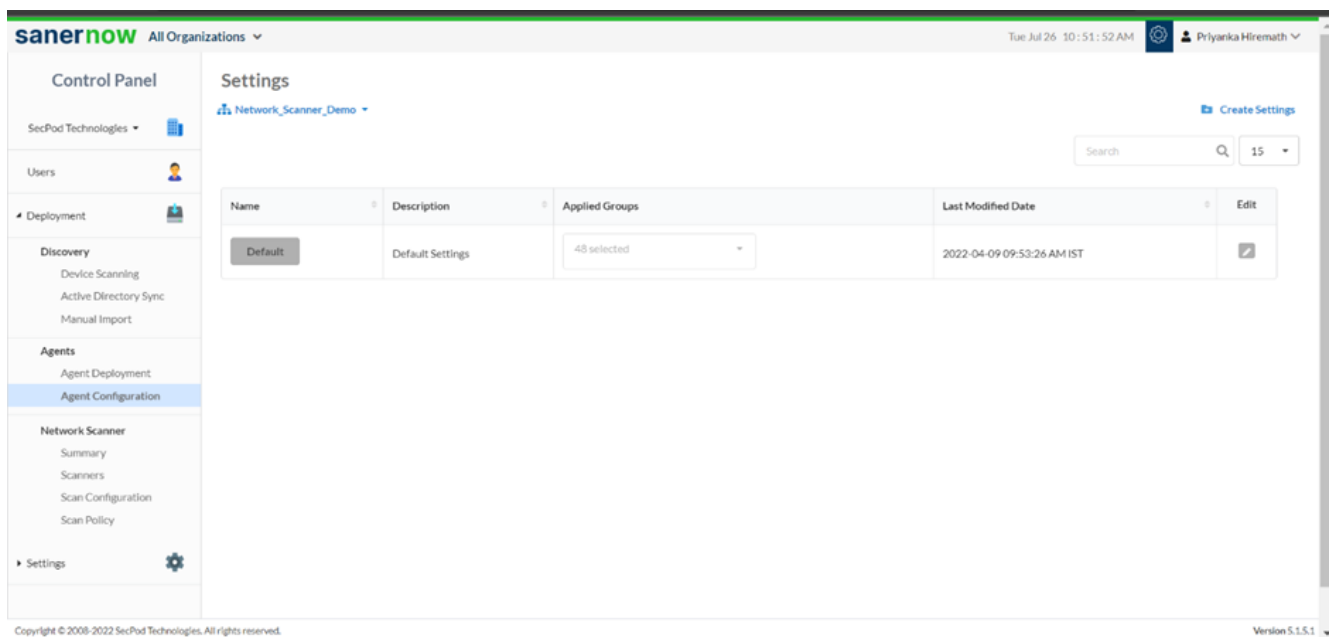

SanerNow provides rapid scans for compliance management. You can schedule the compliance scan by enabling it during the agent configuration.

Let us learn how to run a compliance scan in SanerNow.

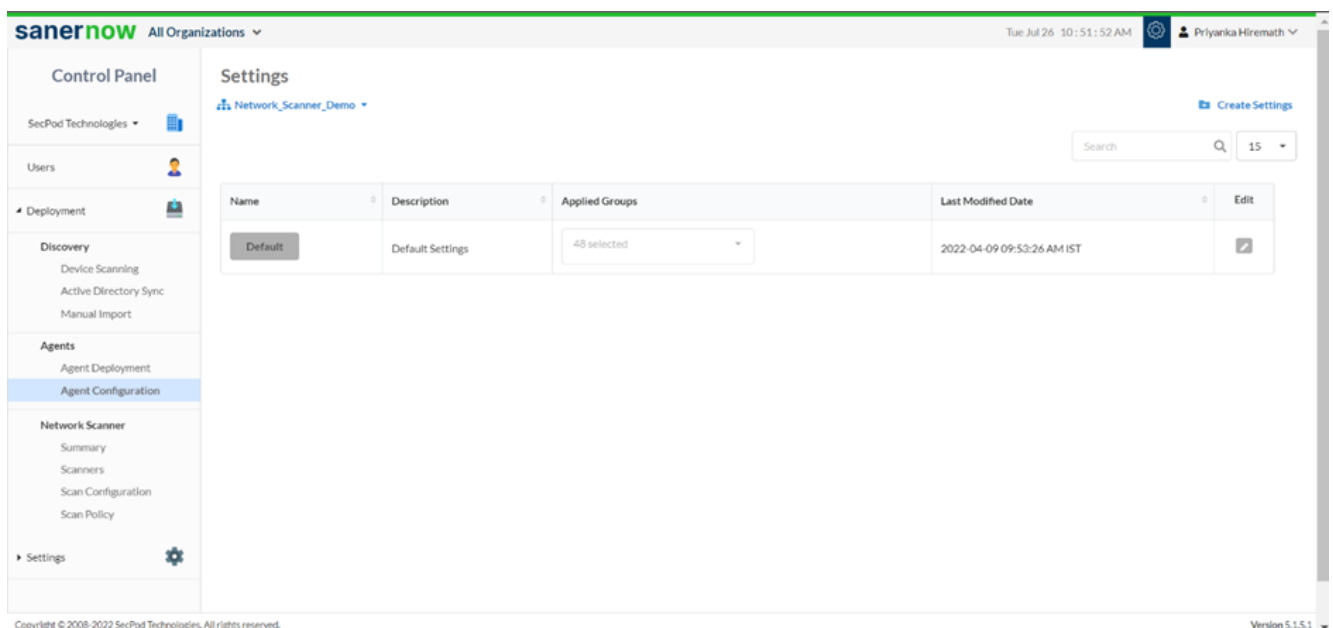

1. Go to SanerNow **Control Panel** settings and select the organization.

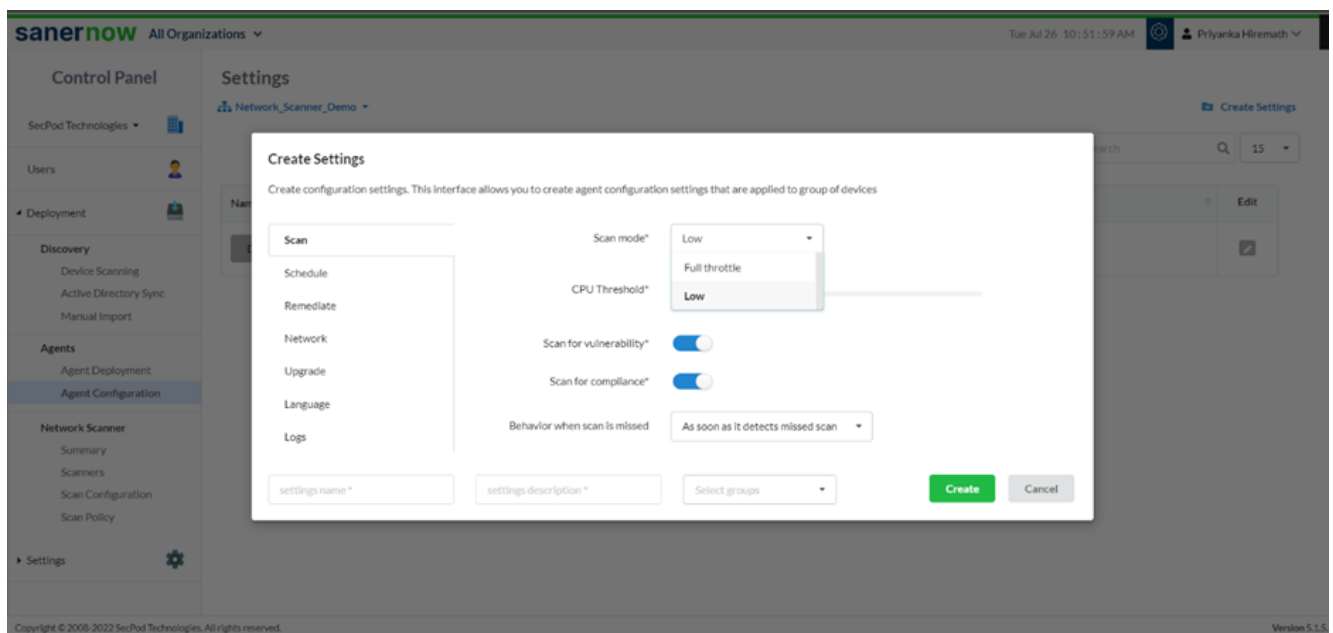

2. Click on **Agent Configuration**.

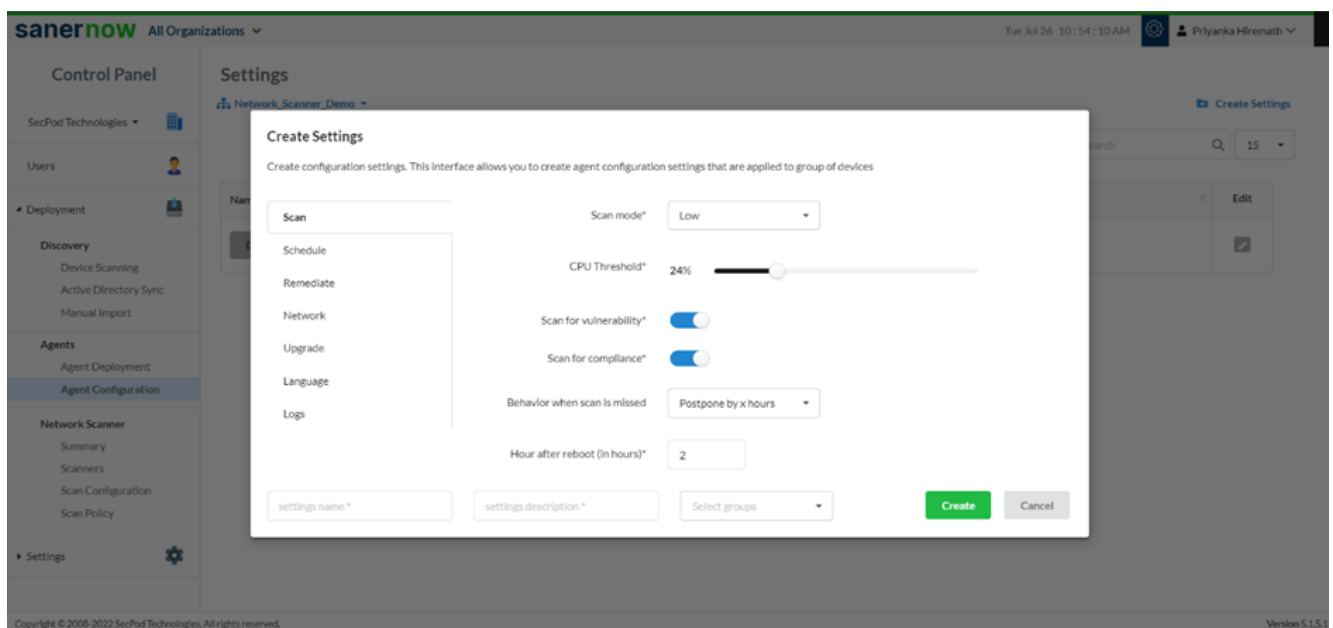

3. Now create the scan settings by selecting **Create Settings**.

4. In **Create Settings** window, select the scan mode: Low mode or full throttle

5. Also, you can set the threshold of the CPU for scanning

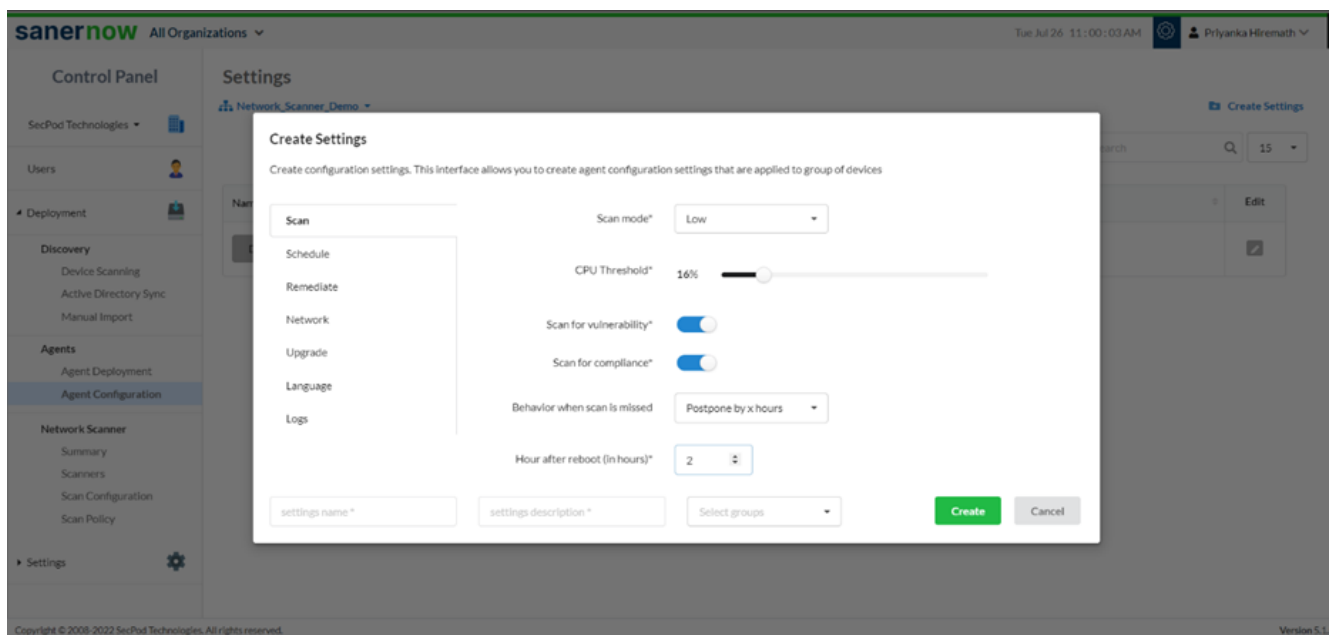

There are two options to scan. One is a vulnerability scan, and the other is a scan for compliance

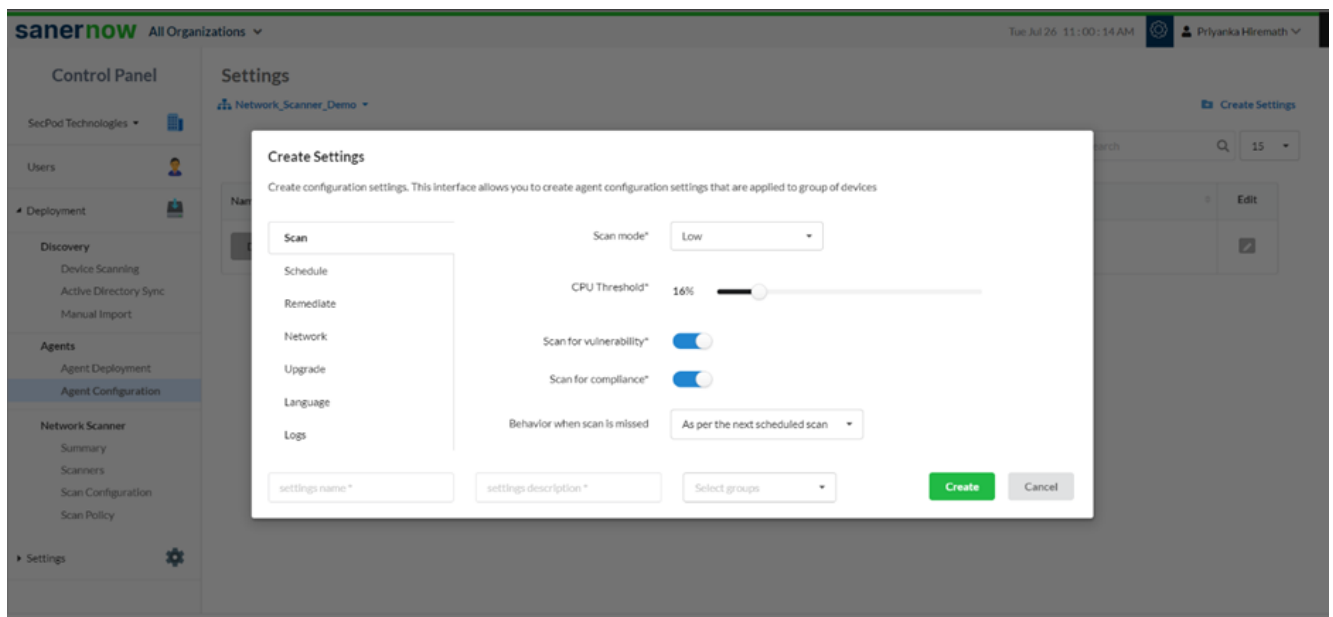

6. To run a compliance scan, make sure the compliance scan is enabled

7. Choose the behavior of the scan when missed:

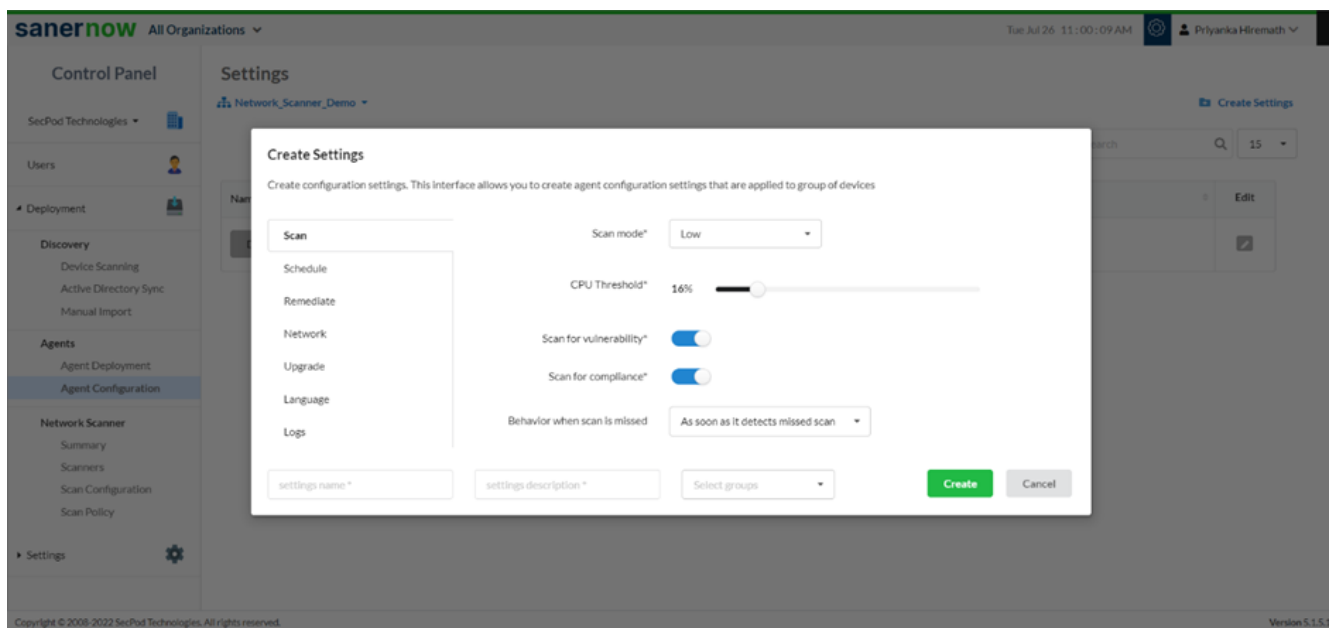

- Postpone by x hours and specify the hour after reboot

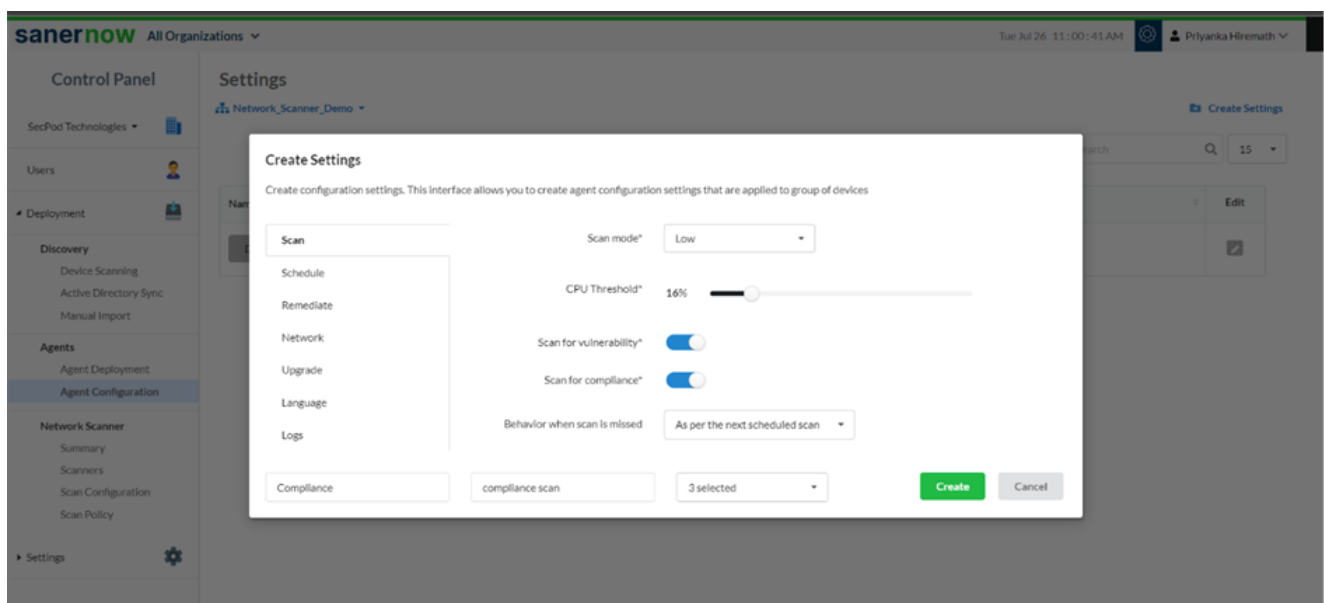

- As per the next scheduled scan

- As soon as it detects missed scan

8. Assign the setting name, setting description, and select the groups to apply these settings.

9. Lastly, click on **Create**.

Now you know how to run a compliance scan.
