Release Notes SanerNow 4.3.0.0

February 3, 2020

SanerNow 4.3.0.0 brings several enhancements to Patch Management (PM) tool. This maintenance release also includes fixes to major bugs, security issues and enhances Rest API coverage.

Release Summary

1. **Operating System (OS) upgrade**, a one-click OS version upgrade is introduced. This feature installs necessary Security KBs, and upgrades the system to the latest version.
2. **Reboot Scheduler** is introduced to schedule the reboots to a particular time. Reboot jobs are listed in the PM status page to track the reboot progress.
3. Added color scheme to charts in reports.
4. Inconsistency in the 'Windows Update' component is automatically resolved.
5. Superseded and older patches are suppressed and only the latest security patches are listed.
6. Non-Security patches are added to the individual device details page, in addition to the security patches.
7. Rest API coverage is enhanced to include newer APIs and improved security validations.
8. Inconsistencies while moving the device from one account to another account is addressed.
9. Upgraded 3rd party dependent libraries to the latest version.
