
Release Notes SanerNow 5.3.1

Published Date: Feb 26, 2023

This maintenance release for SanerNow 5.3.1 contains feature enhancement and bug fixes.

Enhancement:

- **Exclude Feature Scope Enhanced:** We've enhanced the Exclude feature in Vulnerability Management and Patch Management tools, allowing you to exclude CVE, Patch, and Asset at Group(s) and Host(s) levels. Until now, Exclude feature functionality worked only at an Account level. However, with the increased scope of the Exclude feature, you will have greater control to prioritize the vulnerabilities, assets, and patches, giving you increased control over your IT infrastructure.

For more details, click on the links mentioned below:
